

# Employer-Led Organizations and Career Ladders: Linking Worker Advancement with the Skill Needs of Employers

*By Jack Mills and Heath Prince, Jobs for the Future*

**PART OF A SERIES OF REPORTS ON ENGAGING EMPLOYERS IN WORKFORCE DEVELOPMENT**

**JOBS FOR THE FUTURE**

CREATING STRATEGIES  
for Educational and Economic Opportunity

FEBRUARY 2003

## Workforce Innovation Networks—WINS

---

WINS, a collaboration of Jobs for the Future, the Center for Workforce Preparation of the U.S. Chamber of Commerce, and the Center for Workforce Success of the National Association of Manufacturers, addresses the workforce development needs of businesses and communities. Launched in 1997, WINS works with local employer organizations across the country that are on the cutting-edge of workforce development, testing the proposition that they can play a unique intermediary role in achieving a dual goal:

- ★ Improving the economic prospects of disadvantaged job-seekers and workers; and
- ★ Meeting the needs of their member firms for employees at the entry-level and above.

## The Role of Employers in WINS

---

A basic principle of WINS is that efforts to help individuals succeed must provide education and training that meets employer needs for knowledge and high skills. Similarly, individuals—particularly those with low education and skill levels—will not succeed in gaining family-sustaining employment unless they gain the skills necessary to perform in today's complex work environment.

Yet the top challenge faced by the people and organizations whose mission is to serve either constituency—job seekers or employers—is the challenge of engaging effectively with employers. For example, in July 2002, WINS asked a group of workforce development professionals, “What is the primary workforce development challenge facing your community?” *Half* the respondents answered, “Employers are not connected to the system.” WINS then asked, “What is the biggest challenge you face in implementing the Workforce Investment Act?” Over 40 percent of respondents said, “Engaging employers.”

Jobs for the Future has prepared a series of resources on meeting the challenge of engaging employers in workforce development. These include:

- ★ *Employer-Led Organizations and career ladders*
- ★ *From Stakeholders to Partners: Organizing Community Partnerships for Workforce Development*
- ★ *High-Leverage Governance Strategies for Workforce Development Systems*
- ★ *High-Leverage Human Resource Strategies for Employers*
- ★ *Mentoring*
- ★ *Working Together on Worker Training*

## Employer-Led Organizations and Career Ladders: Linking Worker Advancement with the Skill Needs of Employers

*By Jack Mills and Heath Prince*

**E**mployers consistently rank recruiting and retaining a qualified workforce as two of their top priorities. At the same time, poorly skilled workers struggle to find avenues out of occupations that hold little opportunity for advancement, and into those that will pay a family-sustaining wage and offer better upward mobility.

Career ladders meet both employers' needs for a workforce with the right skills and low-wage, low-skilled workers' needs for advancement opportunities.

Career ladders link the multiple skill levels in a given labor market within a network of recruitment pathways for employers and advancement pathways for workers. Employers' demand for skill pulls low-income individuals up from low-wage jobs through the advancement and recruitment pathways created by the career ladder.

Career ladders can help solve recruitment problems, reduce turnover, and increase productivity. They have the potential to provide workers with the skills employers need. By doing so, they make it possible for employers to capitalize on skills acquired at lower levels of employment or through training that targets a business's particular skill requirements.

This Issue Brief introduces employer organizations and their potential partners to the benefits of developing and utilizing career ladders. It also reviews key elements and processes involved in creating career ladders.

Career ladders have the potential to make the labor market more efficient. They can be developed and operated by employer organizations, or organizations they designate. Career ladders focus on occupations that have large numbers of vacancies and that require different levels of similar skills. They meet the needs of one or more employers who want to fill vacancies in those occupations. To do so, they typically engage providers of recruitment, screening, job training, education, and support services. Career ladders leverage skills learned on the job, and use education and training to fill skill gaps. As participants move up to positions with higher skill requirements, the career ladder quickly makes participants available who are able to fill the resulting vacancies.

### ■ Career Ladders

Career ladders rely on employer information regarding skill needs to link multiple occupations across a labor market. Career ladder coordinators form these links by identifying the skills acquired at one level of employment and matching them with the skills required at a higher or complementary level of employment. The coordinators match workers with employer vacancies, as well as with the support, education, and training services needed to ensure that the match succeeds. A career ladder provides employers with new and more reliable sources of skilled labor, *and* it serves as a road map that helps workers navigate through and up a labor market.

Career ladders benefit workers, who get jobs at higher skill levels, and employers, whose jobs have lower skill requirements. Participating employers offering

**Participating employers offering higher wages in skilled positions benefit from a career ladder by getting better access to workers in occupations that require lower levels of similar skills and pay lower wages.**

higher wages in skilled positions benefit from a career ladder by getting better access to workers in occupations that require lower levels of similar skills and pay lower wages. And occupations requiring fewer skills and paying lower wages become more attractive to workers when viewed within the context of a career ladder that transforms “dead-end” jobs—jobs to be avoided or left as soon as possible—into stepping stones to better ones. This benefits employers at lower skill levels by improving worker retention and recruitment.

For workers, a career ladder creates a network of employers cooperating around training and hiring practices. This network uses labor market demand for skills to provide multiple avenues out of low-skill, low-wage jobs and into family-sustaining, skilled occupations. Advancement occurs through vertical routes within a firm, diagonal routes across firms or industries, or hori-

zontal routes into firms or industries that offer better opportunities for promotion.

Career ladders are based on employers’ actual skill needs, positioning employer organizations to play a central role in their development. Potential career ladder partners include employer organizations, individual employers, and support service providers, as well as community colleges and training vendors that provide education and training needed for advancement to higher levels of skill and employment. Labor unions can help manage career ladders or serve as training providers. Career ladders leverage the core competencies of each of the partners to address regional workforce development needs more efficiently.

An employer organization can “size” a career ladder to fit the needs of its members and the resources available locally. By starting simply and building upon successful results, an employer organization can increase its expertise at managing career ladders while generating credibility and resources among potential partners. For instance, the Holyoke Chamber of Commerce (see box) has built a career ladder in the paper-manufacturing and paper-conversion industries. It began by meeting a real need of several companies: to train applicants for an occupation common to participating firms. It has since grown to meet the need for workers in occupations at several levels.

Employer organizations with greater resources can

### Career Ladders at Work

At the orientation for her new hires, a retail employer in one career ladder describes the advancement opportunities within the firm, the skills required to succeed in those positions, and the assistance that store managers will provide with regard to acquiring skills for those who are interested in advancing in the retail industry. In addition, the employer explains to the new hires that succeeding in their current job will also make them eligible for advancement into jobs with other firms in the career ladder.

By communicating early on that there are advancement possibilities, either within the firm or in others, the employer improves retention, productivity, and quality among his or her workforce. In addition, because workers know the entry-level retail job is a rung on a career ladder, the retailer attracts more and better candidates for its entry-level openings.

Turnover and attendance are better, too, due to workers’ desire to advance, human resource policies designed to increase retention and skill development, and the availability of support services.

A retailer who has vacancies in higher-skill positions can select from a

larger group of workers with the required skills. Motivated by the opportunity for advancement, workers learn more on the job. Also, more workers gain skills in training programs.

Workers who are not promoted stay productive, knowing that the retailer will reward their skills and productivity by recommending them to other firms with advancement opportunities.

As a result, other employers offering higher-skill, higher-paying jobs within the career ladder benefit from their ability to select from a pool of applicants who have proven their work-readiness and skill attainment on the job, in other occupations within the career ladder, or through training targeted to employer skill requirements.

Career ladders link diverse occupations in a labor market by aligning the skills acquired at one level of employment with the skills required at another, higher level of employment—and by incorporating local education, training, and support services to assist in acquiring those skills.

Employers benefit from a wider, more highly skilled labor pool. Workers benefit from expanded avenues for advancement and a more transparent labor market.

develop career ladders that meet a wider range of employer needs. Self-assessment and planning steps make it possible to determine the right level of complexity and scale.

## Employer Organizations and Career Ladders

Local Chambers of Commerce, industry associations, and other employer organizations can play a pivotal role in the operation of career ladders. These employer groups can use their preferred relationships with their members to serve as brokers among all of the potential career ladder partners.

The creation of a career ladder leverages an employer organization's core competencies regarding workforce development in several ways:

- Member companies are more likely to trust, respond to, and share proprietary information with the staff of an employer organization that already gathers proprietary information from its members, undertakes activities connected to their businesses, and ultimately depends upon members to stay in business. Career ladders require employers to identify shared workforce training needs. Many employer organizations have the legitimacy, relationships, and working systems in place to do so.
- When an employer organization's members trust it as a source of information and services, this provides an excellent channel to market a career ladder model, bring members together as customers, and support their participation in the career ladder.
- Because an employer organization often brokers services, and sometimes provides them, it is likely to be able to do so in regard to career ladders. Alternately, it is likely to be able to judge whether another organization has the expertise, effective management, efficient operation, and commitment to quality results required to broker and provide workforce development services.
- Because an employer organization represents its members, it has clout. Employer organizations can influence workforce development services and the overall workforce development system to be more responsive to employers.

Employer organizations themselves benefit from career ladders in a variety of ways:

## Career Ladder FAQ

### **What challenges do career ladders address?**

Employers consistently rank the difficulties of finding and retaining a qualified workforce as among their top human resources concerns, due to workforce demographics and rapidly changing skill requirements. Meanwhile, employers that hire from non-traditional labor pools find that many of their entry-level workers face barriers to keeping a job and developing their work skills.

Moreover, the traditional methods for workers to develop careers have diminished in importance: to remain competitive, employers have shed many of the ancillary occupations that they had used as a "proving ground" for new workers. Internal career ladders that extend down to entry-level workers are largely gone, replaced by a contingent labor force that performs specific tasks unrelated to a firm's core functions. In many cases, occupations that once offered potential for skill development and advancement are now performed by specialized, service-sector firms, eliminating the connection between the entry level and opportunities for advancement. Career ladders provide an alternative to these traditional methods for workers to develop skills and careers.

### **What are the benefits for employers at the lower tier of career ladders?**

Employers with lower-tier jobs benefit from a career ladder by reduced turnover, increased opportunity to draw from better-qualified pools of job-seekers, and improved motivation and productivity from their workers. The career ladder transforms their jobs into entry points into a workforce development system that offers opportunities to build skills and advance. Workers who tend to avoid these occupations because of their limited advancement potential come to view lower-level work as steps on career paths that extend within and across firms, industries, and sectors in the local economy. Recruitment, screening, and referral services are designed to assist lower-tiered employers to draw from a wider pool of more motivated and qualified applicants. Because advancement in a career ladder largely depends upon skill development, and can also depend on the recommendations of employers, the level of worker commitment to a job increases, thereby increasing worker retention and productivity.

- Successful career ladders can financially benefit an employer organization's members by lowering turnover and recruitment costs. As a result of these public relations benefits, revenue from members may increase and member satisfaction may improve.
- Career ladders can help employer organizations leverage resources of value to members, such as public-sector workforce development funds.
- Career ladders frequently create forums in which employer organizations can form new relationships with employers and workforce development service providers.

- Successful career ladders have a long-term effect on the local business environment that can position the employer organization for growth.

### ■ Career Ladder Best Practices

Jobs for the Future has conducted a national review of knowledge supply chains, career ladders, job ladders, tiered employment, and similar programs, resulting in several recommendations for planning, developing, and operating career ladders.

#### **EMPLOYER ORGANIZATIONS ARE IMPORTANT AS INTERMEDIARIES.**

Employer organizations can play the leading role in forming the requisite partnerships for career ladders. As intermediaries between their employer members and the broader labor market, employer organizations can aggregate and clarify employers' demands for skills, influence employers to increase their activity regarding workforce development for low-wage workers, reduce the risks and costs of that increased activity, and broker for services on behalf of employer members. In the context of a career ladder, these services can come from various places: community-based organizations, training providers, and the public sector.

#### **CAREER LADDERS RESPOND TO EMPLOYER SKILL NEEDS.**

Whether directly led by employers, or simply designed to be highly responsive to the needs of employers, the activities of a career ladder should be driven by skill needs of the local labor market, as expressed by participating employers. As partners in a career ladder model, employers are well positioned to shape its activities to meet their skill needs. In many cases, this involves participating in curriculum development, adjusting HR practices to accommodate career ladders, and entering into hiring agreements that support career ladder operations.

#### **EFFECTIVE CAREER LADDERS DEPEND UPON THE IDENTIFICATION AND DOCUMENTATION OF TRANSFERABLE SKILLS.**

Transferable skills make it possible for workers to move from one company to another, within or across industries and economic sectors. The ability to advance and recruit workers within a career ladder is predicated on the assumption that certain skill sets are valued in occupations included in the career ladder. Both employers and workers benefit when the acquisition of sets of transfer-

able skills are documented by portable credentials, skills certificates, or academic degrees. This documentation signals to the labor market that the skills have value.

#### **A CAREER LADDER IS MORE EFFECTIVE THE MORE TIERS IT HAS.**

Career ladders are more successful when they cover multiple skill levels. To meet the needs of a career ladder's dual customers—employers and workers—the career ladder will need to provide avenues for advancement beyond entry-level positions. This Issue Brief focuses on career ladders that link occupations ranging from “entry-level” occupations to those that require Associate's degrees.

#### **PARTNERSHIPS ARE CRITICAL.**

Successful career ladders often employ a range of resources to meet the needs of their dual customers. To accomplish this, even the simplest career ladders contain a coordinating entity that manages the movement of workers through the chain, as well as meets the demand for labor as expressed by employers in the chain—and employers who are willing to work with the coordinating entity to employ and advance workers. More elaborate career ladders can involve the coordinating entity, employers, labor unions, community-based organizations, public-sector agencies, funders, and training providers.

### ■ Variations Among Leading Career Ladders

Beyond the elements that career ladders have in common (see Design Principles, below), they vary in several important ways:

- The numbers of occupations and occupational tiers they include;
- The number of career pathways they utilize;
- The numbers of employers and industry sectors they address;
- The source of individuals participating in the career ladder;
- The extent to which employers modify human resource practices;
- The range of workforce development services: recruitment/screening, education/training, and support services; and
- The organization responsible for operating the career ladder.

Most important, career ladders differ in kind: they range from those that focus on advancement within a single firm, to those that focus on advancement among multiple firms within a single industry, to those that cross industries within a single sector, to those that advance workers across multiple sectors of a local labor market.

### ■ Single-Firm Career Ladders

Single-firm career ladders, often referred to as internal career ladders, have been on the decline in recent decades. As firms have sought to create more flexible workforces, they have shed ancillary occupations and focused on their core competencies.

Some businesses have benefited from strengthening their internal career ladders, however. Often through labor-management cooperation, these firms have developed the skills of their entry-level staff, creating candidates qualified for higher-skill vacancies within the firm. These firms target a number of entry-level occupations, develop training curricula for advancement into occupations requiring higher-level skills, and collaborate with training providers and staff to help ensure that vacancies can be filled through internal promotion. In this relatively simple career ladder, key partners include management, worker representatives, and training and support services providers. Essential to such an arrangement is the firm's commitment to it, either through a union-negotiated contract or as a stated human resources policy.

### ■ Single-Industry Career Ladders

Some career ladders train workers to fill similar occupations in multiple firms in a single industry. These career ladders connect a pool of workers trained for relatively skilled, entry-level occupations in participating firms. Participating firms often contribute and aggregate their training funds, and they also collaborate to develop curricula that prepare workers for essentially similar occupations in any of the firms. More sophisticated versions of this type of career ladder target not only entry-level workers but also incumbent workers and transitional workers.

As in some single-firm career ladders, career ladders that operate across firms within a single industry may be aided by strong labor-management cooperation. The agreements that emerge from their cooperation serve as indicators of the importance to both employers and

workers of career ladders in these industries.

Key participants in the single-industry career ladders are firms, worker representatives, employer intermediary organizations, and training and support service providers. As in the single-firm career ladders, agreements among firms regarding hiring and training practices are very important, as are agreements between firms and other partners.

### ■ Sector-Based Career Ladders

Sector-based career ladders target specific occupations or sets of occupations in a particular sector of the economy, then develop skills-training courses designed to prepare entry-level workers for employment in those occupa-

## Career Ladder FAQ

### ***What are the benefits for employers at higher tiers of a career ladder?***

As workers advance through the career ladder, each successive job adds to their skills and readiness for higher levels of work. Built around employers' skill requirements, the career ladder aligns skill development on and off the job with those requirements, and it provides a work-centered vetting mechanism to employers with vacancies. This mechanism can reduce employer risk in the hiring process, reduce turnover, and increase overall productivity.

### ***How are skills identified and developed?***

Employer requirements establish standards for foundational skills. Workers develop these general skills, which are essential to success in entry-level occupations, with the assistance of education providers and career ladder partners, such as local One-Stops and community-based organizations.

Beyond foundational skills, skill development is also designed to meet skill needs expressed by participating employers. Career ladder partners help employers identify these skills, which are developed by a range of education and training providers.

### ***How do employers hold on to top people?***

Companies can become "employers of choice" among their top people by building on their relationships with them. Strategies to retain the most productive workers are personal and focused—identifying them, and responding to their motivations with promotions, development plans, higher pay, bonuses, or better benefits. While career ladders create structures that facilitate advancement throughout the labor market, companies using "employer of choice" strategies take advantage of their employer/employee relationships and the opportunity to act proactively.

Career ladders may also help create a retention culture. Overall retention may improve as workers recognize that advancement opportunities are available through the career ladder—and that these opportunities depend on a person's continuing employment, meeting skill requirements, and achieving performance expectations.

tions. Rather than focussing solely on meeting employer demands for skilled labor, many sector-based career ladders seek to create system-wide change in a labor market by addressing both its demand and supply sides.

Sector-based programs often satisfy demand-side concerns by providing technical assistance to firms, linking firms to new markets, assisting firms in establishing skills standards for an industry, and encouraging firms to adopt model human resource practices. Through these demand-side activities, sector-based programs utilize their industry contacts to create employment opportunities and “job ladders” for workers in low-skill, entry-level positions.

Sector-based career ladders also satisfy supply-side concerns. Most sector-based career ladders rely heavily on customized training programs that are specific to the occupations or industry sectors on which they focus. In addition, most sector-based career ladders provide some degree of pre-employment training in basic work skills. One-Stop Career Centers, community-based organizations, community colleges, and increasingly unions, are providing this pre-employment training. Some of these

career ladders have been created to permit a high range of mobility among occupations within an industry sector. These career ladders sometimes utilize skills certificates that are generally recognized and accepted by participating employers, facilitating worker advancement to higher levels of employment.

Key participants in sector-based career ladders are employers, training and support-service providers, worker representatives, and intermediary organizations that intervene in the labor market on behalf of both workers and employers. Agreements under sector-based career ladders are typically among employers, intermediaries, and training providers, and deal with worker placement and customized training curricula.

### ■ Cross-Sector Career Ladders

At a certain level of employment and skill development, career ladder models can cross industry sectors. These models recognize that basic work-readiness skills are valued across industry sectors, and that worker transfer across these sectors benefits both participating employers and workers seeking to gain skills and increase their income as they advance in the labor market. As workers

## Career Ladders FAQ

### **Who operates the program?**

Determining who operates a career ladder is a key early step. Career ladders can be operated by any organization with the reputation, capacity, and relationships to bring together partners that meet the needs of employers and individuals seeking better jobs. Employer organizations leverage their employer memberships, as well as their relationships with the rest of the workforce development system, to lead or operate successful career ladders.

Employer organizations can also identify other entities to operate career ladders. For instance, community colleges with a strong sense of the skill and labor needs of local employers can operate career ladders. Community-based organizations that have the confidence of the business community also operate career ladders. Unions, through negotiated labor/management partnerships, also operate successful career ladder programs.

### **Who funds program development?**

Funding for career ladders can come from a variety of sources. Some are funded by public workforce development and training sources. For example, the Wisconsin Regional Training Partnership used state and federal training funds as seed money to build partnerships between the public, private, and non-profit sectors to unite the employment and training needs of workers and communities with the workforce needs

of employers. Others leverage state funds for pre-employment training, tuition assistance, and workforce development program redesign by providing in-kind contributions from community colleges. Shoreline Community College, in collaboration with six other Puget Sound Community or technical colleges has developed career ladders in four occupational clusters: manufacturing, customer relations, health services and information technology. Each career ladder pathway features a commitment of jobs by employers for qualified participants, 12 weeks of pre-employment training, customized to employer needs, the opportunity for paid, on-the-job work experience, the opportunity for continued career training, and continuing career counseling. Some career ladders are funded through pooled training resources from participating firms. Trade associations have contributed to funding the development of career ladders that are specific to a given industry. As career ladders develop into a recognized and valued tool for labor sourcing, program operators may be able to price their services and charge fees. The Holyoke Chamber of Commerce in Holyoke, MA has led efforts to build a cross-firm career ladder in the paper manufacturing and conversion industries. It began with one occupational tier, and has expanded to encompass several tiers. The Chamber has led the development of a consortium of paper manufacturers and paper converters, who have collaborated around developing a common curriculum for the Machine Operators' position.

advance beyond the initial tiers in the career ladder, however, cross-sector mobility diminishes as the skills required for further advancement become more specialized to given industries. Since cross-sector career ladders often focus on entry-level employment, a referral source for new workers is essential. These referral sources can be public agencies, job-training programs, and school-to-work programs, to name a few. Also essential to this model is an organizing entity responsible for placing workers in vacancies in participating firms, monitoring workers advancement up the career ladder, and recruiting new workers and firms.

### Designing Career Ladders That Are Employer Organization-Led

Each of the variations on a career ladder model has at its core the complementary goals of creating a more transparent labor market—one in which job seekers can easily identify the skill needs of employers at various levels—and a workforce development system that is more sensitive to the skill needs of employers. By accomplishing these goals, such models are “win-win”—for employers and for workers seeking to advance in the labor market. In addition to these broader, outcome-oriented similarities, each model has at its center an organizing entity that is responsible for managing the flow of information regarding employer skill needs and the community’s ability to meet those needs.

### Employer Organizations In Leadership Roles

Employer organizations are well positioned to serve as the organizing entity for a career ladder. For example, local chambers of commerce and affiliates of trade associations can serve as linchpins by:

- Convening employers;
- Defining and articulating their skill needs; and
- Brokering the services of community training and support service providers to meet their workforce needs.

As trusted intermediaries, employer organizations can solicit proprietary information regarding skill needs and hiring practices from their employer members. They can use this information to match the skill requirements of firms with the skills acquired by workers in other member firms or through education and training programs. Depending on their capacity, employer organiza-

**By accomplishing the goal of creating a more transparent labor market, career ladder models are “win-win”—for employers and for workers seeking to advance in the labor market**

tions can take on activities that range from serving in a coordinating role only, to providing some services, to managing the operation of the career ladder.

### DESIGN PRINCIPLES AND GUIDELINES FOR MEASURING THE EFFECTIVENESS OF CAREER LADDERS

Certain essential elements will be common to most employer organization-led career ladders. These characteristics stem from the nature of the employer organizations’ relationships with their employer members and distinguish this type of career ladder from those that operate without employer organization leadership.

Career ladders that are led by employer organizations generally conform to the following specific design principles:

***Design Principle: Career ladders leverage an employer organization’s relationship with member employers***

***Guideline: An employer organization provides leadership.*** Given the importance of incorporating employers’ skill specifications and demand for skilled labor in the design of career ladders, it is essential that employer organizations provide leadership and oversight of career ladder development and operation. At minimum, this role for employer organizations means supervising the career ladder partnership and its overall operations.

***Guideline: An employer organization either itself manages or selects a credible organization to manage the career ladder and facilitate the relationships among its partners.*** The level of involvement that an employer organization may want to take on should be determined by a self-assessment of its own capacity for managing the career ladder. In some cases, it may be necessary or preferable to contract or partner with an organization that has responsibility for the day-to-day operations of the career ladder.

***Guideline: An employer organization leverages its relationship with its members to engage them in career ladder development and operation.*** It compiles, ana-

lyzes and reports upon employers' skill needs without revealing proprietary information. Additionally, it brings about employers' agreements to participate in the career ladder.

**Guideline:** *An employer organization leads partners in either collaborating on delivering services or integrating service delivery.* Agreements must be crafted relating to the support services and training needs that will be met by the career ladder. This is the case when developing a simple career ladder with few partners or a complex career ladder involving partners from a variety of community-based organizations, public agencies, employers,

community colleges, or unions. In their role as intermediaries between employers and labor markets, employer organizations are uniquely situated to ensure that the services and training offered by the career ladder are best suited to meet employer demand.

**Design Principle:** *Career ladders promote the business community as the central determinant of required skills and training, and build upon existing relationships among firms and providers of workforce development services*

**Guideline:** *The career ladder is demand-driven and responsive to employer workforce development needs in regard to quality, cycle time, capacity, ease of use, and cost.* To gain and sustain employers as its customers, a career ladder should represent a cost-effective method for meeting employers workforce needs, with specific attention paid to quality, cycle time, ease of use, and cost.

**Guideline:** *Skills are developed to meet employer-defined specifications.* The emphasis that is placed on meeting specific skill standards, as defined by participating employers, represents both the primary advantage and the primary objective of a career ladder. This requires employers to identify their skill needs. It also requires employer organizations, as trusted intermediaries between their employer members, to compile skill needs without revealing proprietary information.

**Design Principle:** *Career ladders demonstrate clear pathways—entry-level, to intermediate level, to professional—through a network of member employers.*

**Guideline:** *Competency outcomes are identified and certified.* General agreement among career ladder partners should be reached regarding the achievement of specific competencies required for advancement.

**Guideline:** *Strategies and systems are effective in promoting retention and advancement, making it possible for those who begin with few skills to move up.* From a workers perspective, a career ladder should be an alternate route into and up through a labor market. As such, the career ladder should be designed in such a manner as to build progressively upon the skills and competencies acquired at each level of employment. This will require the managing organization to be equally concerned with workers new to the career ladder and incumbent workers seeking advancement.

## Career Ladders FAQ

### **What types of agreements are employers expected to enter into?**

Agreements between employers and career ladder operators vary with the type and degree of complexity of the program. In one simple model of a career ladder, the program operator manages a wide array of tasks—from recruiting workers, to identifying skills and training resources, to placing, tracking, and assisting workers with advancement. In this model, the program operator's relationship with the employer is similar to that between a placement firm and an employer, with the employer agreeing to fill a vacancy with a worker referred by the program operator. Partnerships—with support-service, training, and education providers—that serve this type of career ladder are typically casual, rarely relying on explicit agreements beyond those between the program operator and the hiring employer.

In more complex career ladders, employers play a key role in design, development, and implementation. In some cases, employers combine their efforts in skills training consortia: curricula and skills are developed for positions shared by the participating employers. More elaborate career ladders can involve the coordinating entity, employers, labor unions, community-based organizations (that can provide recruiting, screening, and support services), public-sector agencies, funders, and training providers.

In these complex career ladders, agreements exist not only between employers and program operators but also among employers regarding hiring and promotion and between program operators and service providers. Agreements between employers and program operators address such issues as the rights and responsibilities of career ladder partners, information sharing about skill requirements and skill attainment, and the content and schedule of required training, education, and work experience.

### **How are support services designed to meet employer and worker needs?**

Providers can target services to support key career ladder activities, such as recruitment and screening training work, in order to make these activities work better and more easily for both workers and employers. Support services (e.g., childcare, transportation, and mentoring services) also benefit from the input provided by employers in the career ladder.

**Guideline:** *Training and support services are provided that are appropriate to the population served.* The career ladders proposed here serve dual clients in the labor market: employers and low-skilled, low-wage workers. Many of the workers who will benefit from career ladders will come to the job with a variety of barriers to job retention and advancement. The training and support services offered as part of the career ladder should meet the needs of a working population that may require significant assistance with transportation, child care, and “soft skills” training, to name a few needs.

**Design Principle:** *Career ladders provide pathways or structures for employers to “grow” or find workers that meet their business needs.*

**Guideline:** *Occupations with a range of skill levels are part of the career ladder.* A career ladder most effectively serves both its customers by providing links in a wide range of occupations and skill levels. Employers will benefit from wider access to workers in industries and occupations not normally considered for recruitment. Workers will benefit from the avenues out of the traditional “dead-end” jobs provided by career ladder links to higher-paying occupations in a range of industries.

### Creating a Career Ladder: Stages of Development

A region’s needs and the capacity of its employer organization and others it partners with will be key determinants of the way it develops its career ladder model. Initiatives should be developed that produce the clearest benefits for the employers, workers, and job seekers who participate in the career ladder. A primary goal should be achieving high-quality implementation in a timeframe that meets expectations, based on the resources that are likely to be available. Approaches can be developmental, starting simply and adding components as resources and interest allow.

Three stages of development sketch a standard process for creating and operating career ladders that match qualified workers with high-demand occupations.

- Assessment and planning;
- Partnership building and program development; and
- Operation and sustainability/expansion.

Usually, assessment and planning begin the process. However, depending on the degree of employer organiza-

tion involvement in local workforce development activities, it may be appropriate to start at a stage other than assessment and planning.

### Assessment and Planning

**Assess your organization’s capacity and willingness to undertake the development and leadership of a career ladder.** Can the organization play a role in career ladder development? What core competencies and experience in workforce development can it build upon? Are resources available, or can they be raised? Will the organization’s leadership support the initiative?

**Identify target industries and occupations for inclusion in the career ladder.** Which occupations will be easiest to build into career ladders, given the regional economy and labor market? What skills, and for which occupations, are most in demand skill and will continue to be in demand for the foreseeable future? Among these, which occupations require similar skills, moving from less well-developed skills to more well-developed skills?

**Assess employer demand for an alternative method of getting trained workers.** Do local employers need an alternative source of qualified workers? How well does the workforce development system meet their labor needs?

**Assess your community’s ability to support a career ladder.** Are there adequate training, education, and pre- and post-employment support service providers to meet the needs of career ladder participants? Do the providers have a demand-driven approach, or are they interested in adopting one? Do they want to become more effective

#### Cape Cod Hospital, Hyannis, Massachusetts

Entering its twentieth year of operation, this career ladder program offers professional-level classes for union members in non-professional occupations, such as housekeeper or dietary assistant. It was created through an agreement between SEIU Local 767 and management at Cape Cod Hospital.

#### Holyoke Chamber of Commerce, Holyoke, Massachusetts

The Holyoke Chamber of Commerce has led efforts to build a cross-firm career ladder in the paper-manufacturing and paper-conversion industries. It began with one occupational tier and has expanded to encompass several tiers. The Chamber has led the development of a consortium of paper manufacturers and paper converters, who have collaborated around developing a common curriculum for the Machine Operators’ position.

**Solicit assistance from partnering employers, community colleges, and training providers with developing curricula to meet skills specifications.**

and efficient? How will education and training services that build skills in the occupations that compose the career ladder be developed, if these services don't already exist? What portable credentials, especially those based on industry standards, can program operators use to measure the skills developed through education/training? What support services do individuals need in order to participate in any recruitment/screening activities that may be part of the career ladder, to work successfully in career ladder occupations, and to learn effectively in education/training.

**Identify lead employers in target industries and determine their willingness to assist with the development of a career ladder.** Which employers are interested in participating initially? These may be companies with the most pressing needs, or ones whose business model is to benefit from gaining "first-mover" advantage. Is it possible to build a career ladder based on the occupations of their workers? Is it possible or necessary to build more than one career ladder? Which employers are more likely to participate after the program has a track record of successful operation and has gained the advantage of the learning that an early follower derives?

**Identify sources of potential financial support for the career ladder, including public funds, private contributions, fees-for-service, and foundation options.** Are

### Jobs With a Future, Dane County, Wisconsin

The Jobs With a Future project consists of partnerships focused on workforce skill and training issues in three industries: manufacturing, health care, and finance and insurance. This project was initiated in 1996, when the Dane County Executive reconstituted the Dane County Economic Summit Council, a blue-ribbon commission of representatives from the public, private, and non-profit sectors, including leaders from the business community. As part of its mission, the Summit Council wanted to make higher-paid, higher-skill jobs a reality for all Dane County residents. The council retained the Center on Wisconsin Strategy to analyze the labor market, help design a better integrated system of labor market administration, and develop the industry partnerships. Workers are trained for various levels of employment and, once they have earned the requisite credentials, are hired by participating employers.

public funds available to support training, education, placement, and post-employment support functions? Are local charitable foundations or philanthropic organizations willing to support the career ladder initiative? What is the appetite among local employers for fee-for-service training and placement programs?

**Identify goals for the career ladder.** Do the occupations it is important to address fit within one career ladder or more than one? That is, do the occupations all require the development of similar skills, or do differing groups of occupations require the development of different skill sets? To what extent do occupations potentially forming the career ladder build the skills and provide the credentials necessary to prepare workers to be candidates for each succeeding occupational tier? Can articulated steps in skill acquisition and occupations that meet the needs of the career ladder's dual customers be identified? Would restructuring occupations to build needed skills be in employers and workers interest? How many career ladders do you want to develop at first? In the long run?

### Partnership Building And Program Development

**Begin by gaining the support of lead employers.**

Identify a core group of employers that would be willing to engage in the career ladder development process.

**Expand the core group to include a wider range of employers in the targeted industries.** Approach employers in targeted industries and industry sectors to recruit them to career ladder participation. What skills are easily identified as common, entry-level skills across a range of occupations?

**Identify skill requirements at multiple stages of employment—from entry-level to occupations requiring an Associate's degree or an advanced certificate—among targeted industries and employers.** Solicit input from participating employers on skill specifications for multiple tiers of employment. Solicit assistance from partnering employers, community colleges, and training providers with developing curricula to meet skills specifications.

**Expand the group of partners to include providers of training, education, and employment support services.** What partners can provide the education, training, and support services necessary to build the career ladders?

Identify the missing services and then recruit providers to the career ladder.

***Establish roles and responsibilities for all partners.***

What organization should manage and staff the development and operation of the career ladder initiative?

***Identify trainers and funding sources for training workers to meet the specified skill requirements.***

Where will individuals come from to fill the skill needs of the occupations in the career ladder? Will they come from companies that have poor opportunities for promotion, high turnover, and large numbers of employees with low skills and little work experience? From recruitment/screening agencies (such as One-Stops, staffing firms, workforce development service providers, or TANF agencies)? From providers of education and training? Or from all of these sources? Is funding for training available on the job, or within the community?

***Establish hiring agreements among employers to facilitate hiring and promotion within the career ladder.***

Which employers will agree to sign a Memorandum of Agreement or Understanding to demonstrate commitment to the career ladder? Which employers will agree to fill job vacancies with workers participating in the career ladder? Which employers will agree to common criteria for promoting career ladder workers?

***Establish how worker career paths will be monitored.***

Who among the career ladder partners will be responsible for tracking the progress of participants and ensuring that support services are provided throughout their advancement?

***Incorporate a continuous improvement process in the career ladder.*** Develop a process and assign responsibility for incorporating adjustments and improvements into the career ladder.

***Develop a marketing strategy.*** Prepare a strategy for keeping potential partners and funders informed of successes.

## **Operation, Sustainability, and Expansion**

***Match new workers with appropriate training providers or partnering employers.*** How will entry-level vacancies identified by partnering employers be filled with career ladder workers? Will pre-employment training be required?

### **Shoreline Community College, Seattle, Washington**

Shoreline Community College has created career ladders to meet the needs of a wide range of employers. TANF recipients and other low-income individuals can enroll in college programs that include access to these chains. Several of the programs (such as manufacturing and health care) are sector-specific, while others (information technology and customer service) are occupational in focus and serve employers in a variety of sectors.

For example, Shoreline's Information Tech Career Pathway begins with Pre-Employment Training that prepares new workers for entry-level work. From there, workers receive Data Technician Training, General Office Training, or Microsoft Office Applications Training that allows them to move into a variety of occupations across several sectors. Beyond these initial rungs in Shoreline's Career Pathway, workers can receive training for occupations that require higher skills and offer increased pay and improved advancement opportunities.

### **EDSI, Philadelphia, Pennsylvania**

For several years, until 2001, Greater Philadelphia Works, the city's Welfare-to-Work program, employed a "Tiered Employment" model, developed and administered by Educational Data Systems, Inc. This career ladder was designed to advance workers from entry-level occupations that required little skill and paid low wages into positions with employers requiring greater skill levels and paying higher wages.

Key elements of the tiered employment model included:

- Negotiating a defined set of expectations among a group of employers regarding setting a standard for hiring and promoting entry-level workers;
- Creating a "new employee protocol" that communicates advancement opportunities and expectations to participants;
- Training staff on how to counsel participants regarding opportunities offered by the tiered employment model; and
- Establishing internal controls to track the progress of participants through higher tiers of employment within prescribed timeframes.

***Match entry-level workers with training providers or partnering employers who have vacancies at higher levels of employment.*** Are vacancies in occupations requiring more advanced skills being filled by entry-level workers from elsewhere in the career ladder? Are employers with vacancies in skilled positions recruiting from within the career ladder?

***Match skilled incumbent workers with training providers or partnering employers who have vacancies in complementary or higher levels of employment.*** Does the career ladder provide access to adequate training and education services for skilled incumbent workers who wish to move into higher paying positions?

**Monitor placements.** Are career ladder participants receiving available retention and advancement services? Are participants proactively utilizing the career ladder for their career advancement? Are participating employers satisfied with those workers hired through the career ladder?

### ■ A Better Labor Market

Once in operation, the career ladder makes a local labor market function better and makes it easier to understand, for employers as well as workers. Employers improve their access to workers in other occupations who may be developing skills that are in high demand. Workers view low-skill, low-wage jobs as entry points into a workforce development system that provides opportunities to increase their skill levels and advance their careers. Employer organizations and their partners in the career ladder meet their customers needs more effectively.

The chief challenge is to size a career ladder to fit the community's niche, needs, and resources. The initial focus of a new career ladder should be on developing a *quality* service for employers and participants. From small-scale successes, the focus can advance to expansion, incorporating these lessons on planning, marketing, fundraising, and partnership building. The result will be a system that is more responsive to employers—and that gives workers clear pathways for advancement through the labor market.

### ■ Resources

In addition to the other reports in the WINs series on employer engagement, the following resources provide useful information on both the theoretical and practical concerns with linking occupation and employers in a career ladder.

Dresser, Laura and Joel Rogers. December 1997. *Rebuilding Job Access and Career Advancement Systems in the New Economy*. Madison, WI: Center on Wisconsin Strategy Briefing Paper.

Fitzgerald, Joan and Virginia Carlson. June 2000. "Ladders to a Better Life," *The American Prospect*, Vol. 11 *Special Issue on Making Work Pay*.

Newman, Katherine S. 1999. *No Shame in My Game: The Working Poor in the Inner City*. New York, NY: Alfred A. Knopf and the Russell Sage Foundation.

*Heath Prince brings his experience in state and federal workforce development policy analysis to Jobs for the Future's work on building economic opportunity for low-wage workers. Prior to coming to JFF, Mr. Prince was a planner at the Texas Workforce Commission, where he was part of a team that developed and managed post-employment job-retention programs for former TANF recipients in numerous communities. Mr. Prince has authored JFF Issue Briefs on workplace mentoring for new employees and on career ladders for low-wage workers. He leads JFF's research on several components of Workforce Innovation Networks—WINs.*

*Jack Mills is a program director at Jobs for the Future, where he leads research and development related to workforce development initiatives that meet the needs of employers and low-skilled adults. He has co-authored Business Participation in Welfare-to-Work: Lessons from the United States, with Richard Kazis and Financing Workforce Intermediaries: Current Trends, Emerging Needs, and Strategies for Future Innovation, with Jerry Rubin and Marlene Seltzer. He serves on the advisory and policy committees of the National Network of Sector Partners. Before joining JFF, he was director of the City of Cambridge's Office of Workforce Development. He has an M.P.A. from Harvard's Kennedy School of Government, with a focus on workforce development policy and economic development.*
